FirePro Demonstration in Delta Pyramax Co., Ltd

———— 6th Nov, 2014 ————

On 6th Nov 2014, we have launched a fire demonstration in Delta Pyramax office with about 20 government officers including engineers from Architectural Services Department (ASD) & Electrical and Mechanical Services Department (EMSD).

We have prepared a cabinet of size about 1 cubic meter equipped with a FirePro FP-100S model. A fire is ignited inside the cabinet and FP-100S is activated by a battery box of 12V/DC. The fire is eventually extinguished by FirePro and the whole process is witnessed by the attendees.

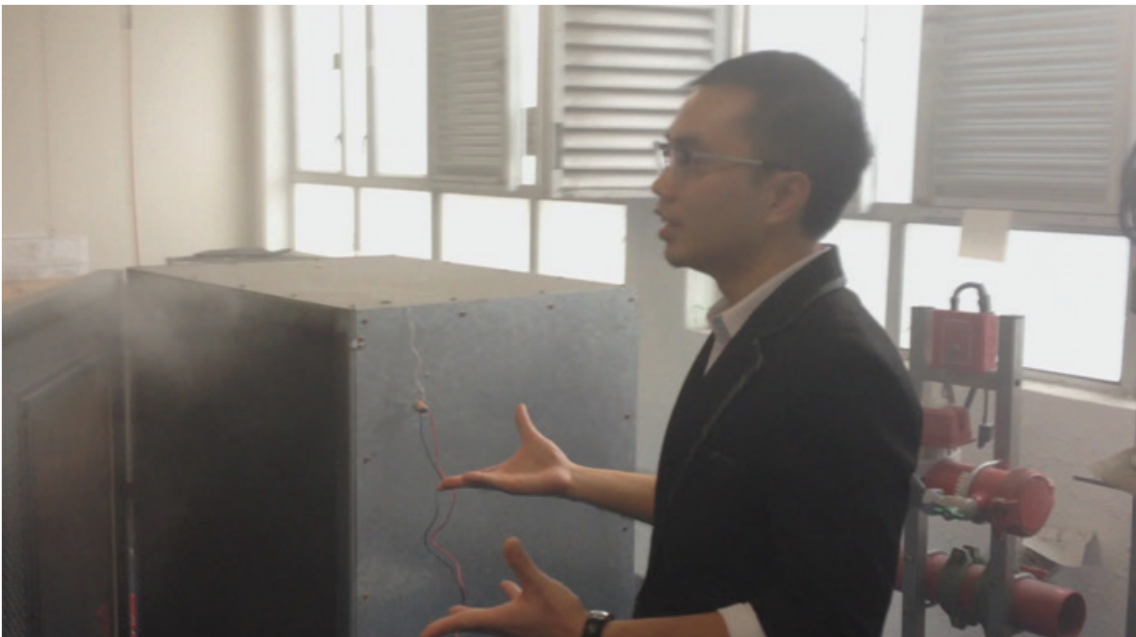

The prime aim of this demonstration is to show the audience how FirePro extinguish a fire and the extinguishing mechanism beneath FirePro. It is a success one as we receive positive comments from the attendees and they are impressed by the event as condensed aerosol is something new to them.

A fire is ignited inside an enclosure

Kelvin uses a battery box of 12V/DC for activating FirePro.

Kelvin is explaining how the fire is extinguished by FirePro.

The audiences are actively asking for information about FirePro.

Louis is responding to the audience's enquiries.

It is the first demonstration of FirePro to ASD & EMSD, we are very glad to have their interest in FirePro. A live demonstration is more practical and impressive rather than talking about theory. On the other hand, we have also shown them FirePro aerosol is non-toxic as we carry out the whole process unmasked.
