

DATA MARS

our high quality partner

Automated laundry processes

Today, textile identification and sorting in industrial laundry processes can be significantly enhanced through employing RFID technology.

By attaching tiny transponders to garments, uniforms, linens, mats and mops, ownership of items is always distinguished. Textiles are easily identified as they pass by an antenna in any position, with amazing advantages for industrial laundries.

Benefits include rapid garment identification, automatic sorting, error-free processing, which reduces manual labor and is a long lasting solution.

DATA S

Saves Time, Saves Money and Easy to Use

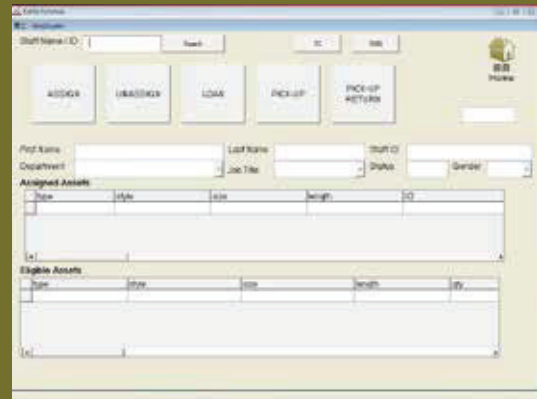

Software for your Assets Tracking and Route Accounting Needs

DATS is a complete product rental management system for commercial, industrial, hotel, resort and institutional laundries who understand the value of identifying assets with either HF or UHF RFID chips. Our system contains many features which help control costs and bill customers accurately.

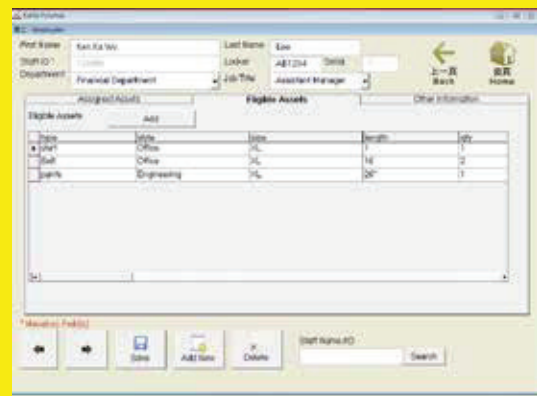

The activity icon is used for the variety of asset transactions dealing with employees. Example: assigning and un-assigning asset, loan, pick-up & pick-up return. To locate assets, just enter the Staff Name / ID.

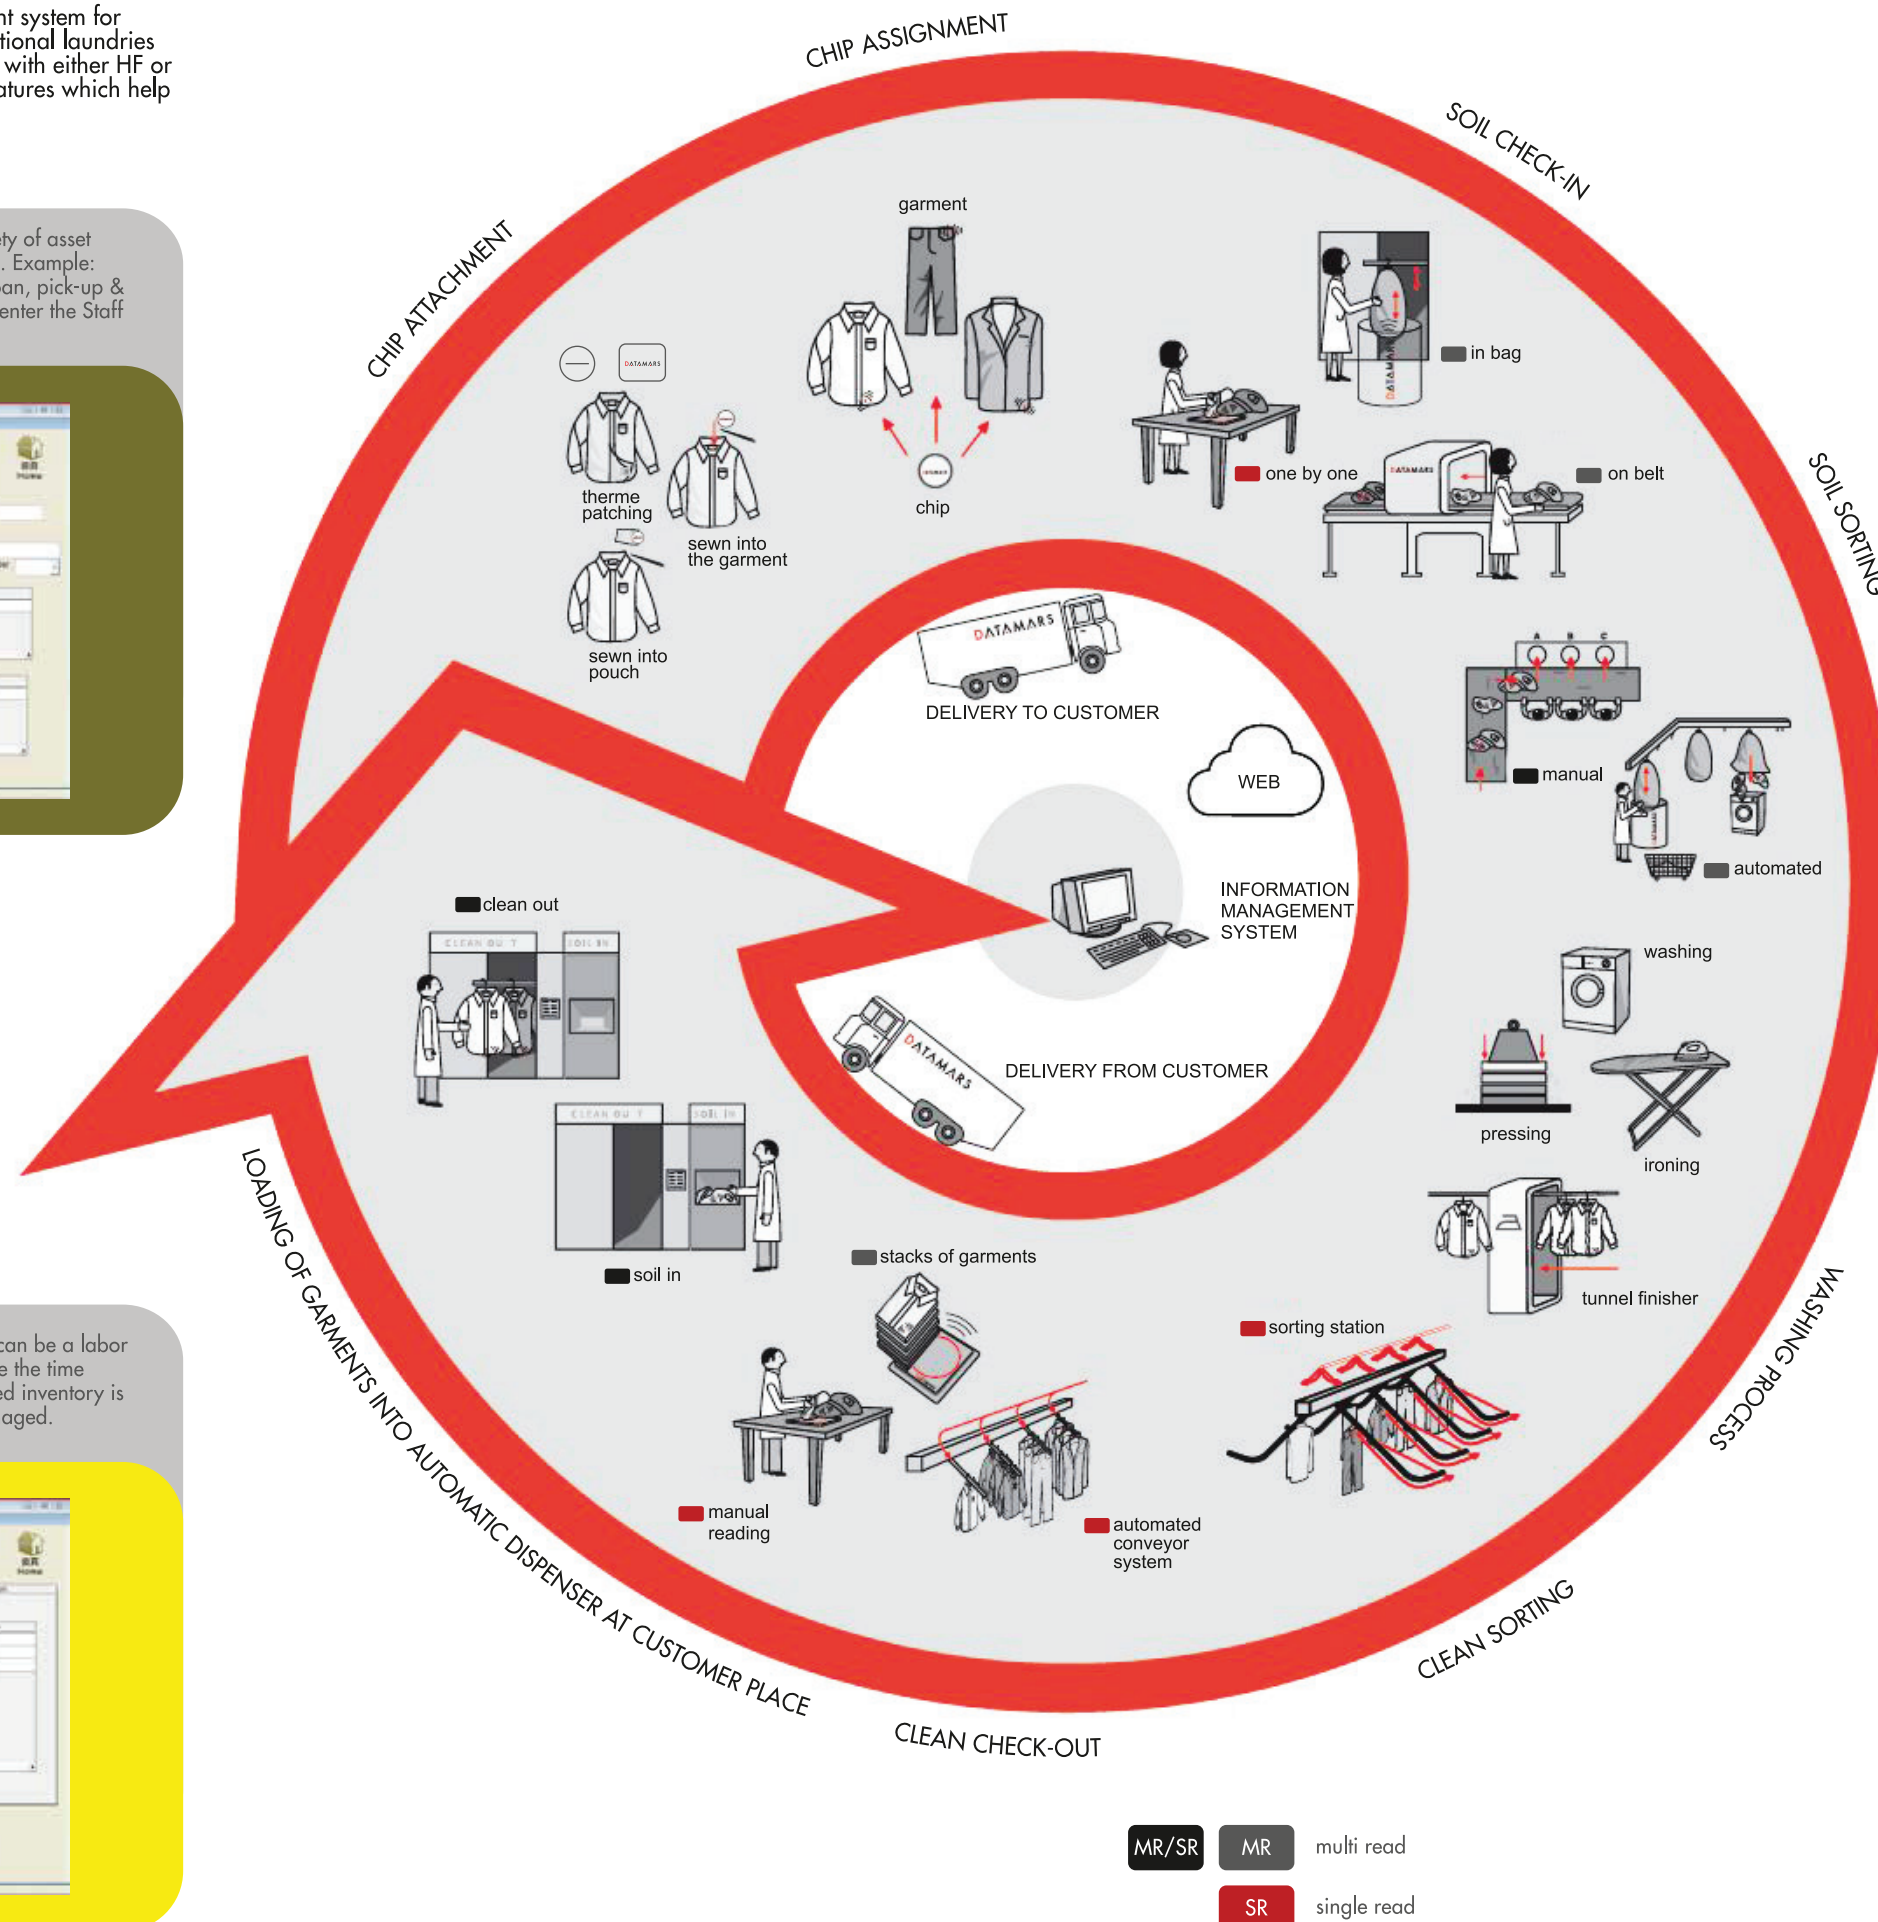

員工 Employees

Managing user assigned assets can be a labor intensive task. DATS helps reduce the time needed to ensure that all assigned inventory is correct, up to date and well managed.

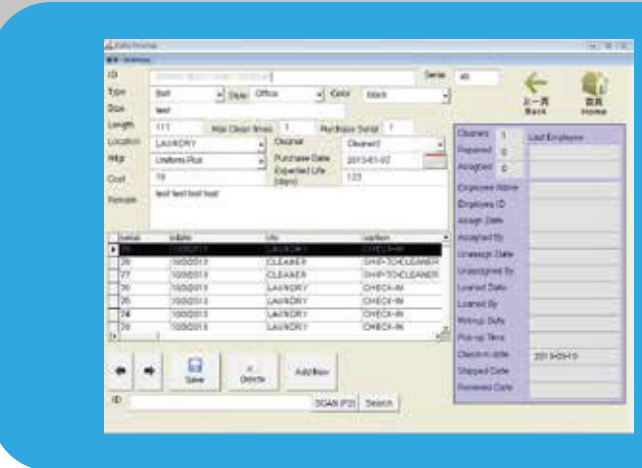

THE INTELLIGENT LAUNDRY CYCLE

DATS provides complete inventory management thus ensuring maximum reuse of current assets. It is the most fundamental function for all companies to track and manage their inventory.

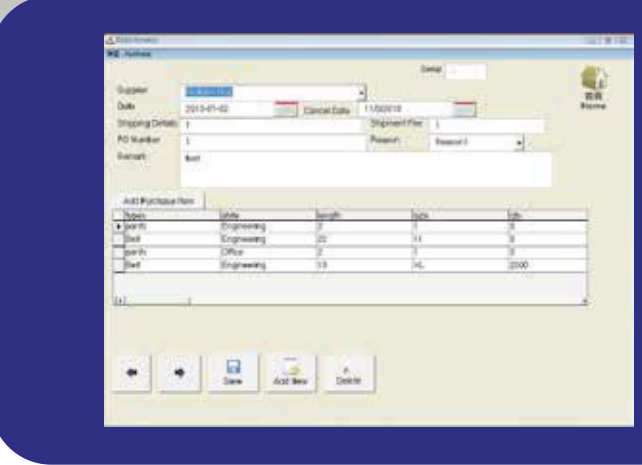

庫存 Inventory

Proper purchasing begins with identifying and justifying the need for additional inventory. DATS provides an integrated framework that facilitates and monitors purchasing activity at anytime. The sales icon is used to sell assets to employees. Sale price and minimum quantity should be defined to sale items.

辦貨 Purchase

DATS comes with a full featured reporting system, it is important to utilize the powerful reporting capabilities. It includes a wide variety of reports that helps managing the business and communicates with customers. Moreover, the reporting system is designed to grow with your company. New reports can be added to meet your business change. The reports are designed to be expandable and customized for your particular needs.
