A new way to bath

～入浴新體驗～

あと一歩だけ前に進もう、入浴が変われば介護が変わる。

1. Safe to use 安全

Nanomist Bath does not require whole body immersion to experience a warm bath. Much lower stress on your heart compared to whole body immersion bath or sauna.

2. Easy to use 易用

Portable and mobile.
Easy to set up next to the bed.

3. Save resources 節省

Less preparation time for caregiver.
Save water as one person only requires 300ml of water.

For users 使用者

1. Just sit and enjoy, let 38~42°C of Nanomist Bath clean the body
2. Sweat only, no water dripping after bath, avoid creating slipping hazard
3. Gentle on the heart, less stressful compared to whole body immersion bath
4. Skin moisturizing and warming effect lasts for hours
5. Promote blood circulation and metabolism

For caregivers 照顧者

1. Save time attending a patient compared to whole body immersion bath
2. Move bath to patient, reduce lifting and transferring
3. No permanent installations required, plug-and-play design
4. Easy to store

For facilities 設施/機構團體

1. No permanent installations required, plug-and-play design
2. Less preparation and attention time relieve labour stress and reduce cost
3. Low water consumption 1.8L per hour
4. As little as 300ml of water per bath*

*Based on recommended 10mins per use

What is Nanomist? 什麼是納米霧?

A bath that does not require whole body immersion into warm water to enjoy one. It keeps the internal temperature between 38-42°C, significantly lower than dry sauna. This puts minimal stress on the users' heart while allowing the user to relax both physically and mentally.

Moisturize skin and warms body for hours. Promote blood circulation and metabolism. The fine water particles wrap the whole body from the core, cleaning the body and keeping it warm.

1 No changes in blood pressure 血壓不受影響

No changes in blood pressure before & after

The above graph shows the change in blood pressure before and after use of Nanomist bath.
 The average blood pressure before using Nanomist Bath is 104.47/70.30mmHg.
 The average blood pressure after using Nanomist Bath is 105.13/67.7mmHg.
 So there is no significant changes in blood pressure was found using Nanomist Bath.
 The average heart rate before using Nanomist Bath is 76.33bpm.
 The average heart rate after using Nanomist Bath is 77.17bpm.
 So there is no significant changes in heart rate was found using Nanomist Bath.

(Research from University of Osaka Prefecture)

How does it clean your skin? 納米霧如何清潔肌膚?

Most of the dirt on the body becomes sticky and emits odour as sweat and sebum come into contact with oxygen and oxidize. The moment you sweat, no stickiness or odour will be created right away. Nanomist Bath increase body temperature which encourage users to sweat. Sweat formed emulsifies with sebum, and the emulsified sweat is then rinsed off by Nanomist that is small enough to enter skin pores.

Therefore, just by sweating and wiping your body using Nanomist Bath gives you a cleansing effect. Your skin will have a clean and soothing feeling you have never experienced before.

2 Avoid risks of falling 避免地面濕滑跌倒

Reducing risks

BRING BATH TO BED - Falls are the principal cause of injury (50%) in older people which could result in serious injuries and fractures*. Slippery floors are a hazard, by bringing the bath close to the user completely avoids accessing slippery environment.

LESS WET - Nanomist Bath uses 28-30ml/min in a form of mist within a contained space. It leaves no puddles of water on the floor when the user exits the bath.

SWEAT ONLY - Nanomist Bath cleans the user through sweating. The user will not exit the bath wet, avoiding dripping water onto the floor creating slipping hazard.

CAREGIVER OSH - Bringing the bath to the user greatly reduces the number and effort for lifting and transferring, reducing risks for both user and caregiver.
