PREPARED FOR THE
FUTURE?

All pictures shown may vary from the machine's standard scope of delivery.

Economic arguments

- Reduced cleaning intervals due to high cleaning ability and cleaning quality.
- Minimization of labour cost (simple use of **hyCLEANER® red EVO III** after a short training; only one person required).
- Low water consumption compared to manual cleaning methods, gentle on resources.
- The whole **hyCLEANER® red EVO III** concept is service-friendly and requires only low maintenance.
- Increase of the property's intrinsic value, as damages caused by permanent soiling cannot occur.
- Cost-effective construction. The use of **hyCLEANER® red EVO III** can already be considered in the planning stage.

Product specification

The **hyCLEANER® red EVO III** cleans different forms of façades, surfaces and materials – especially horizontal profiled metal cladding – very gently, effective, fast and above all, economic.

The machine works with high-pressure water and does not need any electrical connection. Both, the glass and the frames are cleaned simultaneously.

All water leading elements are made out of stainless steel. Purified-water can be used and the glass surfaces dry up, leaving no streaks behind.

A further advantage of **hyCLEANER® red EVO III** is the running wheels. The do not leave any marks on the surface of the façade – gentle cleaning can be so easy!
